

## Flatten the learning curve

### The Start button

In the lower-left corner, it puts what you need at your fingertips.

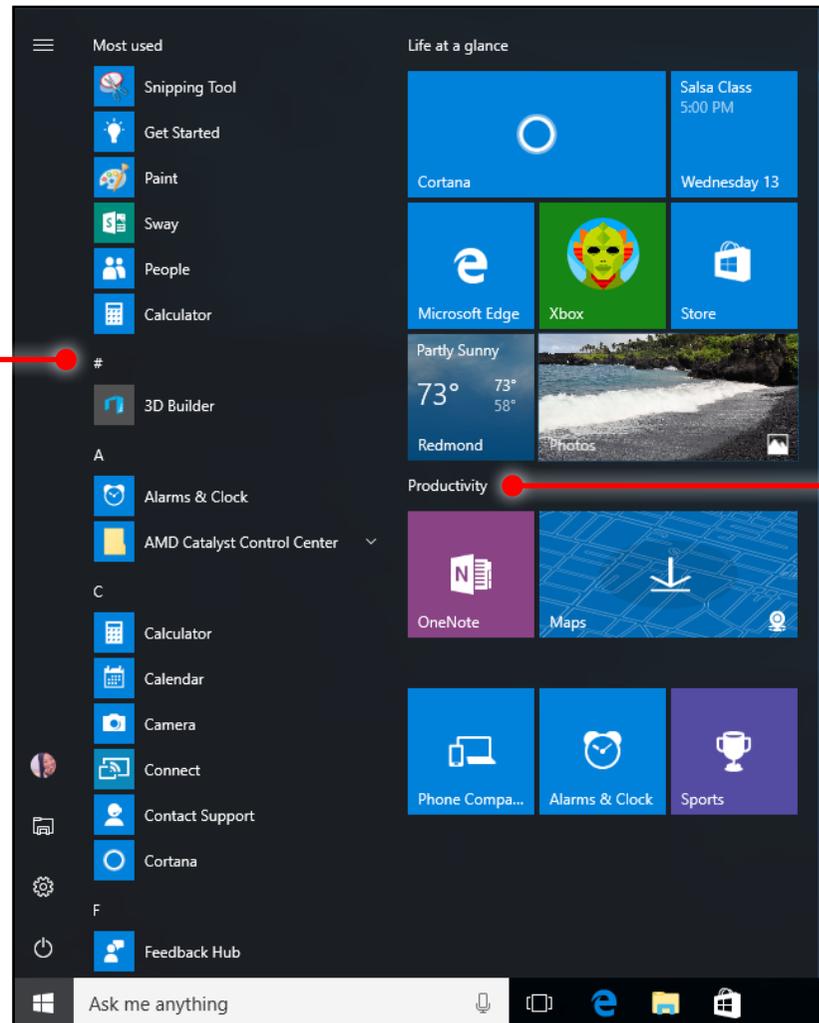

### Browse every app

### Find files

### Personalize settings

Make the defaults even better. Monitors, networks, printers, and more.

### Turn the PC off

### Use an app all the time? Pin it

Press and hold (or right-click) an app, then select **Pin to Start**.

### Group apps

Drag apps into groups, press and hold (or right-click) to resize, and select the title space to give the group a new or better name.

Meet new friends and reconnect with old ones on the taskbar. Let's start with the left side.

## Start button

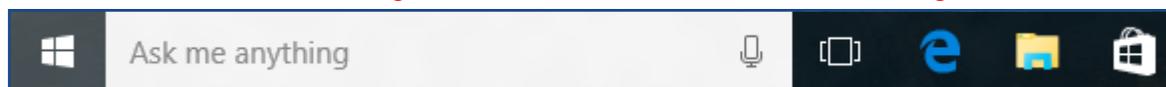

On the far left, right where you expect it. It's how to get to all your apps, settings, and frequently used files.

## Search for everything

Find anything on your PC, in the cloud, or on the web by entering your search here.

## Stop printing

If you've been printing webpages to mark them up with a pen, check out the Microsoft Edge browser. Editing web text has never been simpler (or better for the environment).

## Expand your desktop real estate

Create virtual desktops to group apps and quickly switch between them. Keep your work and personal stuff separate.

## Apps for your org

Get new apps from your organization's page in the Microsoft Store. Or browse apps on your own to do more, be more creative, or have fun on a break.

And here's the far right side...

## Another place to pin your apps

If you want even quicker access to frequently used apps than the Start menu, use the free space to pin them on the taskbar.

## One-click access to the important stuff

The all-new action center  is where a single click can project your screen, connect to a device or VPN, switch to tablet mode, read your mail, and more.

## What time is it?

What *day* is it? Restyled clock and calendar where you expect to find them, keeping you on time and organized.

## A little-known time-saver

Click or tap this area at the far right of the taskbar to minimize all the open apps at once.

## Action center

### Check your mail

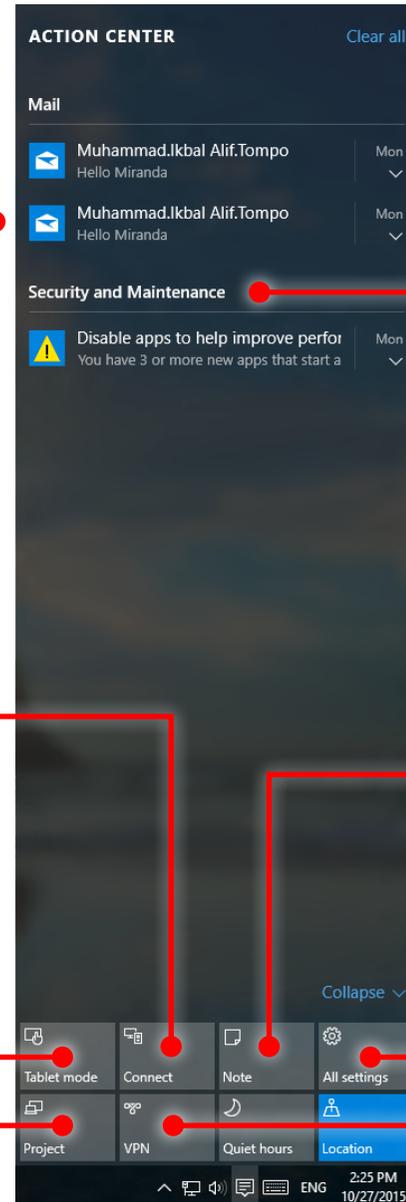

Scan your recent messages and reply right from here instead of opening your mail app.

### One-click connections

Connect to a Bluetooth radio, Miracast TV, or WiGig dock.

### One-tap switch to tablet mode

Project to a screen with a tap or click

### Clear everything at once

Old news? Clean house with a single tap or click.

### See if your PC needs attention

### Open OneNote on the double

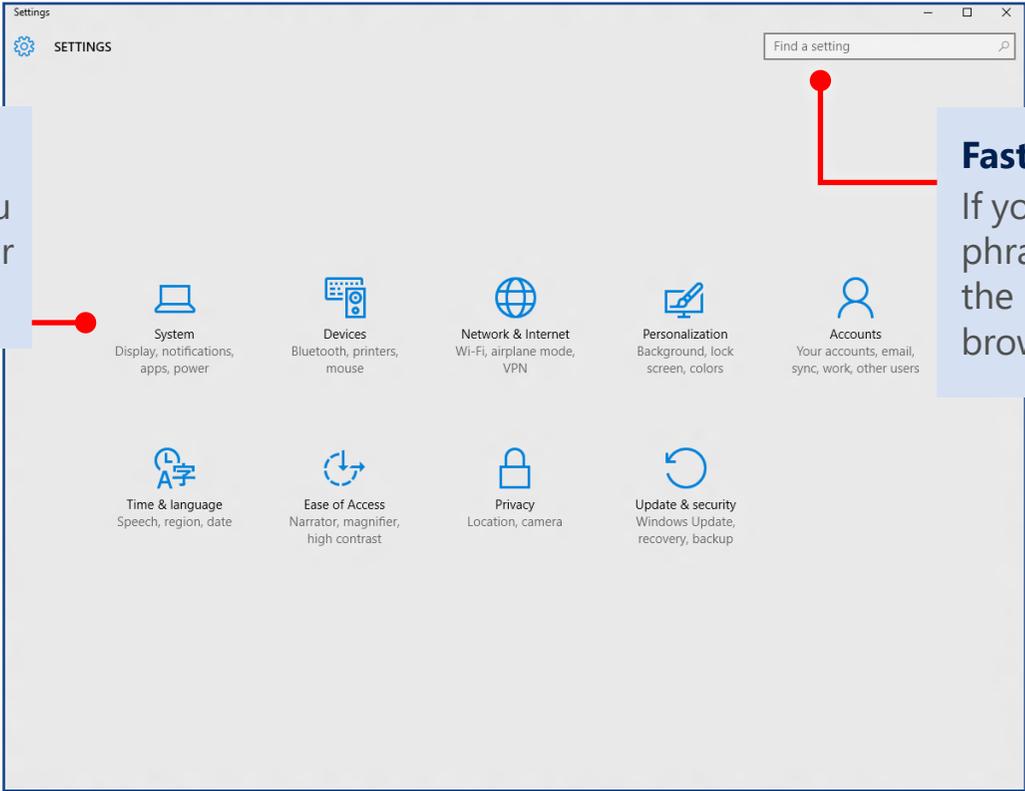

### Get to all the settings

### Connect to your network

## Settings up close

Need to tweak the defaults? Not a problem. Use the **Settings app** to get to what matters to you, including the settings still in **Control Panel**.

The best place to find an app's settings is in the app itself. Look for this icon: 

The screenshot shows the Windows Settings application window. At the top left is the gear icon and the word "SETTINGS". At the top right is a search bar labeled "Find a setting". Below the search bar are ten category tiles, each with an icon and a list of sub-topics. Two callout boxes are present: one on the left pointing to the "System" tile, and one on the right pointing to the search bar.

Category	Sub-topics
System	Display, notifications, apps, power
Devices	Bluetooth, printers, mouse
Network & Internet	Wi-Fi, airplane mode, VPN
Personalization	Background, lock screen, colors
Accounts	Your accounts, email, sync, work, other users
Time & language	Speech, region, date
Ease of Access	Narrator, magnifier, high contrast
Privacy	Location, camera
Update & security	Windows Update, recovery, backup

**When you're not sure...**  
But you'll know it when you see it, browse categories for what you want.

**Faster results using search**  
If you know a key word or phrase, use search to get the right result quicker than browsing.

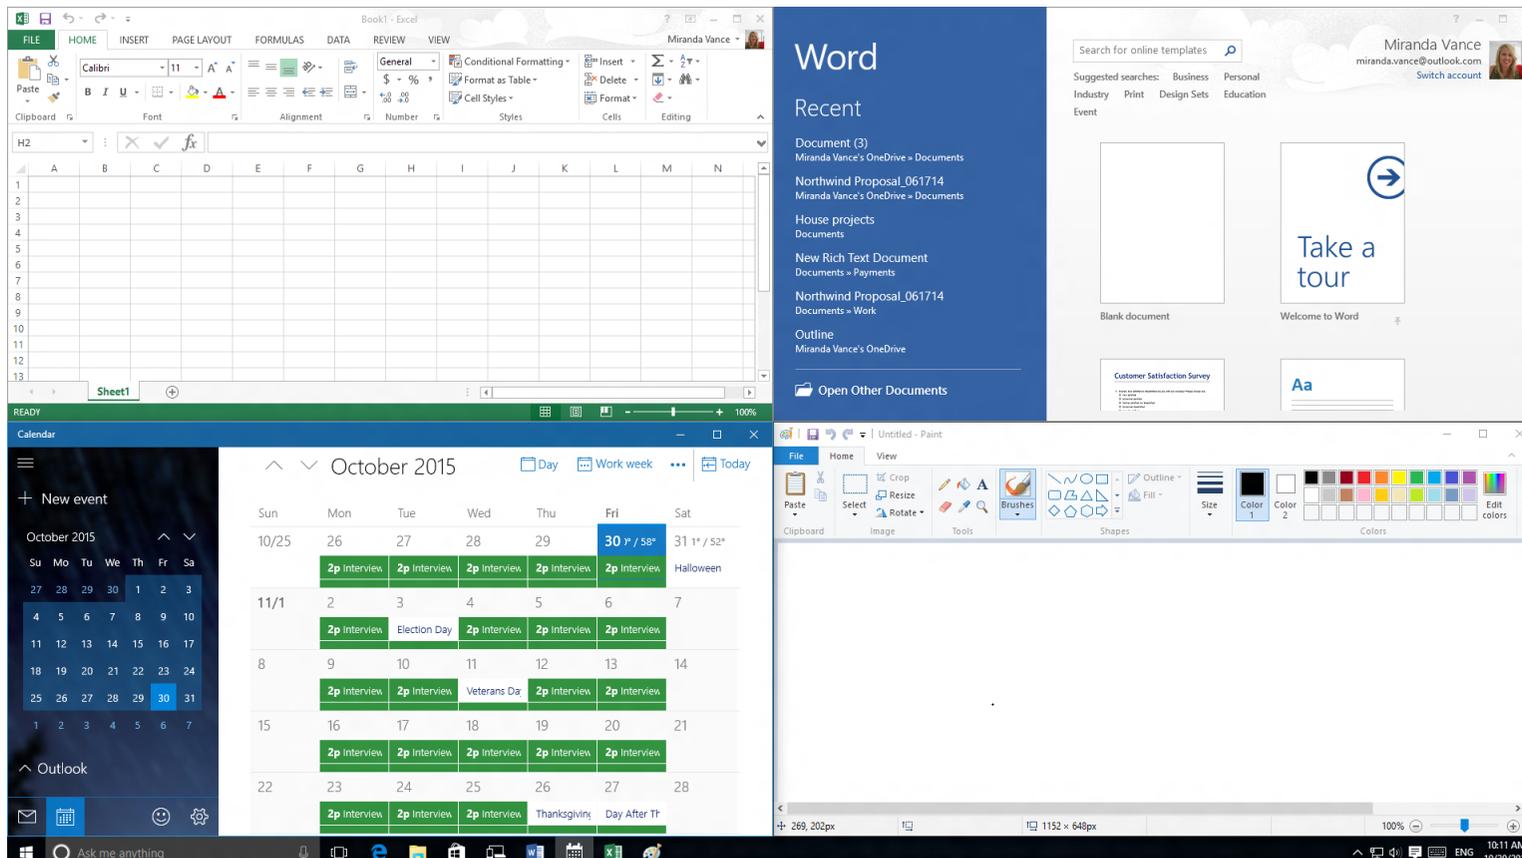

# Quick Start: Desktop at work

See more of your work at once

**Grab the top of a window and drag to a corner or side**

Do it again with another app. Snap as many as four at one time.

**Tap or click Task view  button to switch apps**

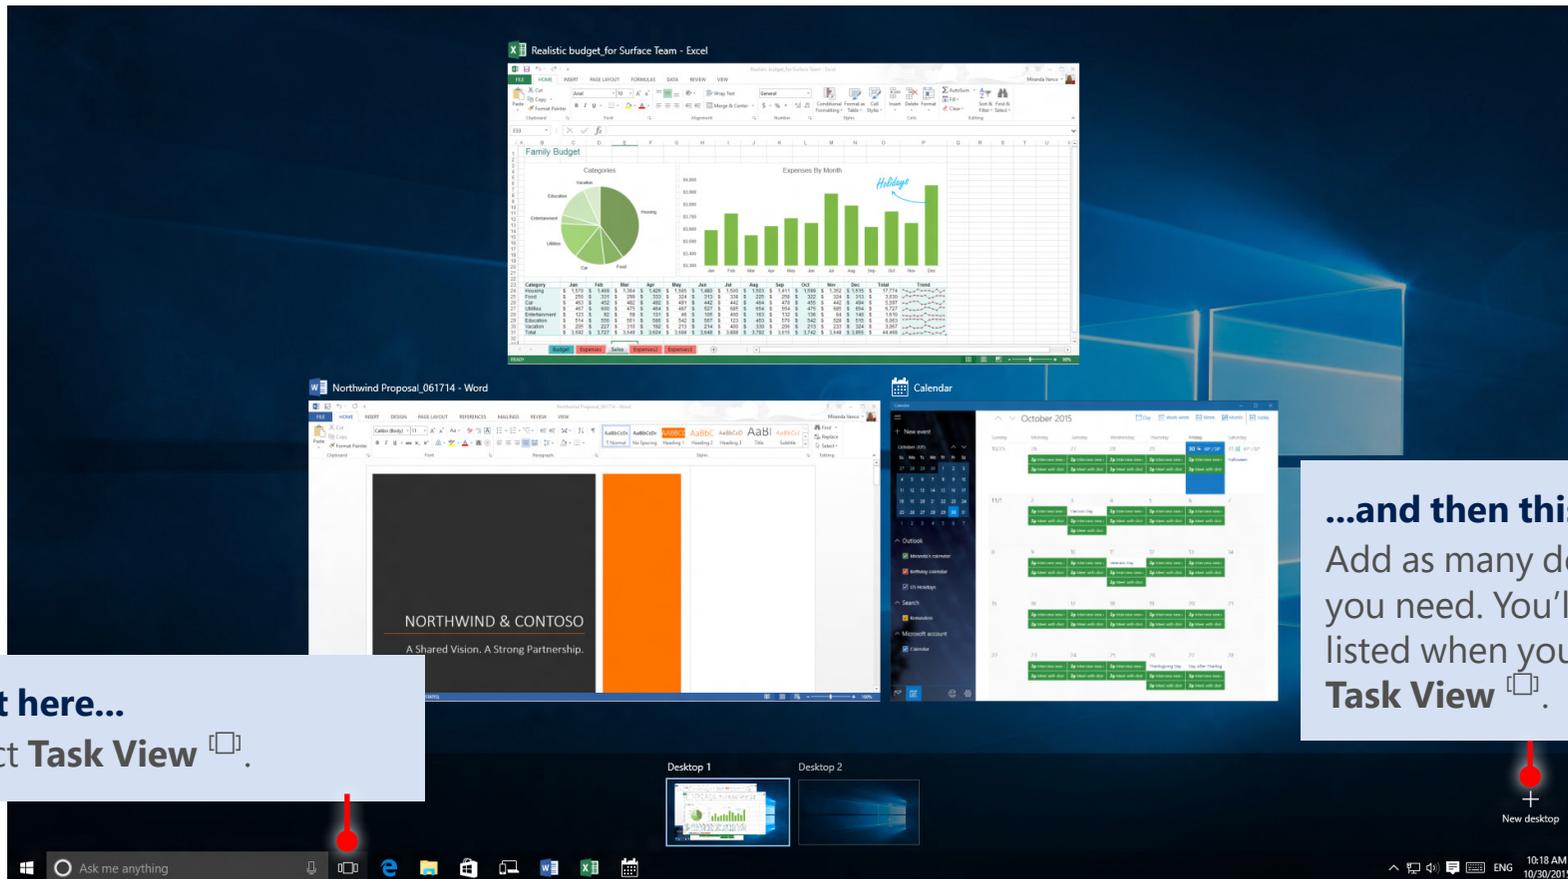

# Quick Start: Desktop at work

## Get organized

Create virtual desktops to group apps together by project, type, or whim. Keep your work apps in one desktop and your personal apps in another, making it easy to switch between them.

To move apps between virtual desktops, select **Task view**  and drag an app from one desktop to another.

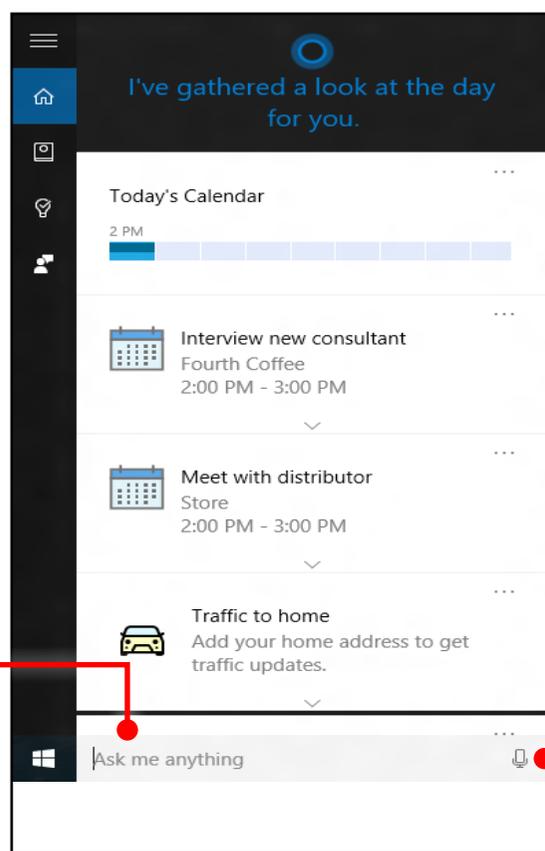

**Start here...**  
Select **Task View** .

**...and then this +**  
Add as many desktops as you need. You'll see them listed when you use the **Task View** .

## Cortana goes to work

Cortana helps you find things on your PC, manages your calendar, tracks packages, and can tell you a joke on a rough Monday. The more you use Cortana, the more personalized your experience will be.
